

Efficient software – Efficient project

## **SIB** (Seeing is Believing) **Workshop**

Give Dürr *Projects* a trial in your own project environment with your real project data and your project team. Experience firsthand the advantages of Dürr *Projects*.

For four weeks we will provide you with a fully functional working environment. Together with your IT department we set up the server with the Dürr *Projects* database in your network. In cooperation with your project management we determine the necessary master data and configuration data.

Within only half a day your server is ready for use and the project structures and parameters can be fixed in a template project according to your needs. Based on this template you can create new projects within minutes and work with them.

Together with your project team we set up your first project and coach your project team in working with the software, allowing you to assess Dürr *Projects* in your daily work.

Within the subsequent four weeks we will come to your company once a week, coach your team in the practical use of the program as well as in the respective project management processes. Of course we are at your disposal to answer any questions concerning the work with Dürr *Projects*.

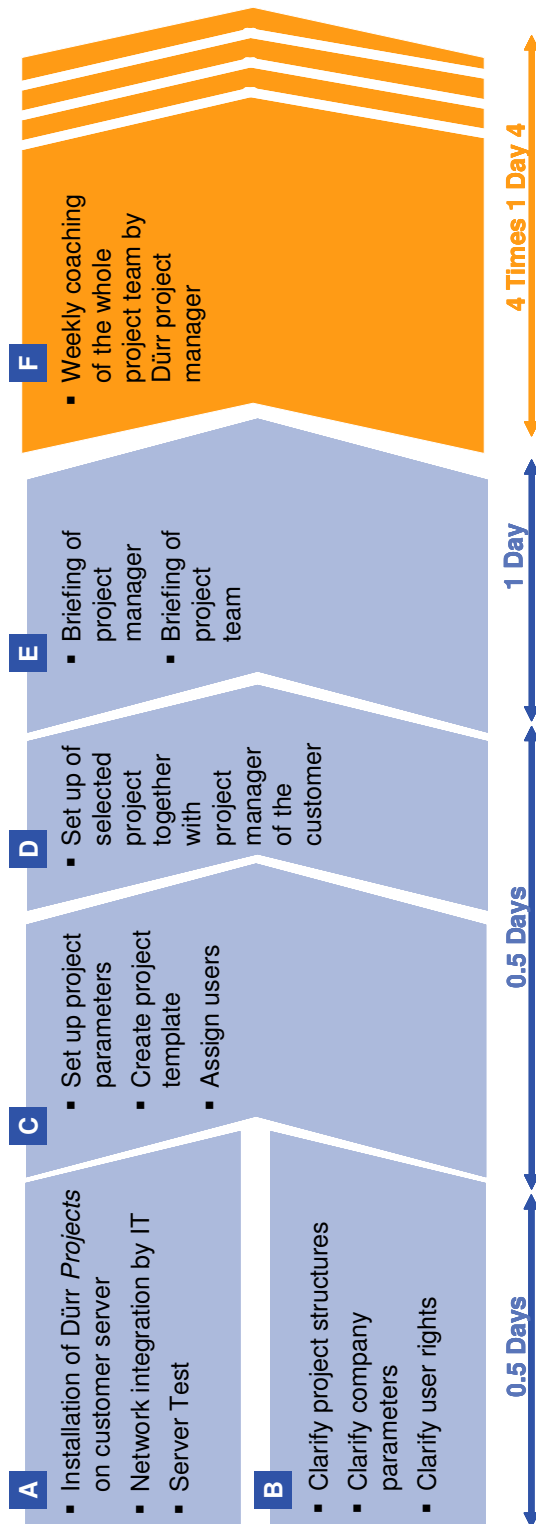

We only charge you for our personnel and travel costs. In case Dürr *Projects* is ordered later on, these costs will be settled proportionately.
