

# Act now: Safety for exhaust air purification systems

Extend the life of your system

# Act now: Safety for exhaust air purification systems

## Extend the life of your system

### OBTAIN SAFETY STANDARDS

As an operator of exhaust air purification and incineration systems, it is crucial to meet the highest safety and health standards. With the support of Dürr, you can ensure that your systems are always up to date with the latest technology.

### ACT BEFORE IT'S TOO LATE

Electronic safety devices in your systems have a limited lifespan. If these are not renewed in a timely manner, you risk failures that can be not only costly but also dangerous. According to the standards IEC61508-2 and ISO13849-1, the lifespan of these devices is only 10 to 20 years. After that, functionality can no longer be guaranteed. To ensure the smooth operation and safety of your systems, it is crucial to renew these components in a timely manner.

### WHEN SHOULD YOU ACT?

Do not wait until it's too late. We recommend checking the functional safety of your systems from the age of 7 and taking action before the 10th year of life at the latest. Only in this way can you ensure that your systems comply with legal requirements and do not pose a danger.

### TAKE CONTROL – WITH DÜRR BY YOUR SIDE!

Contact us to ensure that your systems can be operated safely and efficiently for many years to come.
