DXQ (Digital Intelligence by Dürr) Gluing Symposium 2019

Nico Koch, Manager, PE3, Dürr Systems AG

Do you want to improve the KPIs in your production?

PLANT AVAILABILITY Do you want to improve your plant

availability?

PRODUCTION QUALITY Do you want to improve your production quality (first run rate)?

MAINTENANCE COSTS Do you want to reduce your maintenance costs?

PROCESS OPTIMIZATION Do you want to optimize your production process?

ROOT CAUSE ANALYSIS

Do you want to facilitate the root cause analysis?

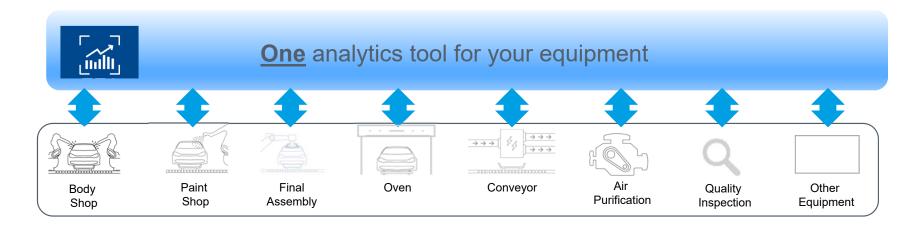

OUR SOLUTION:

DXQequipment.analytics and DXQequipment.maintenance

DXQequipment.analytics

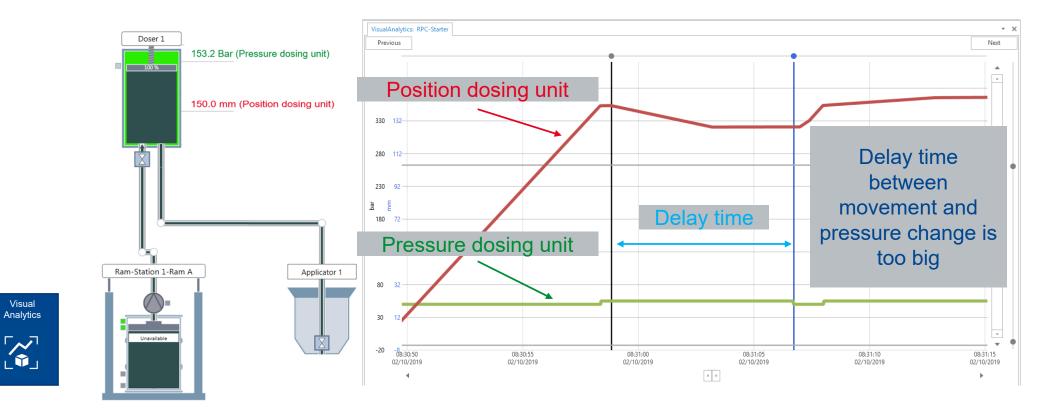

... gives you a deep insight into the data of your plant for

- root cause analysis
- process and equipment optimization
- ... provides solutions to improve your quality & first run rate
- ... provides solutions to improve your plant availability

DXQequipment.analytics Faster troubleshooting with Root Cause Analysis

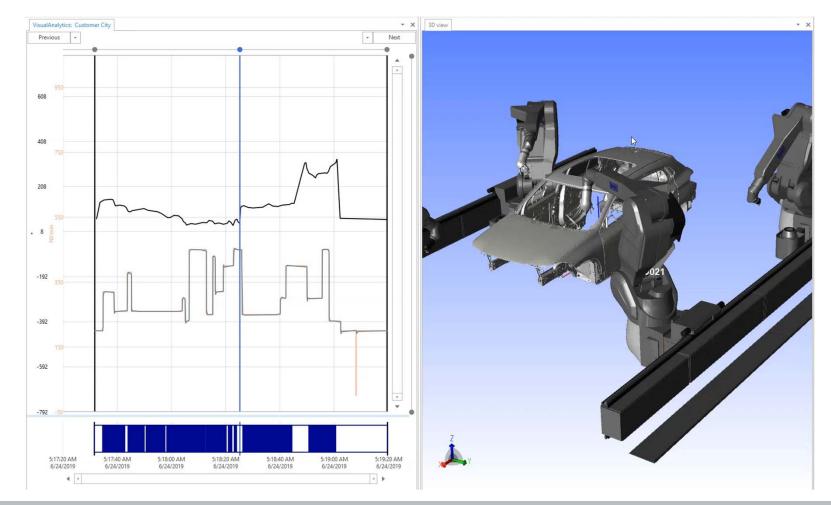

- Defective pressure sensor
- Situation can be easily recognized with Visual Analytics

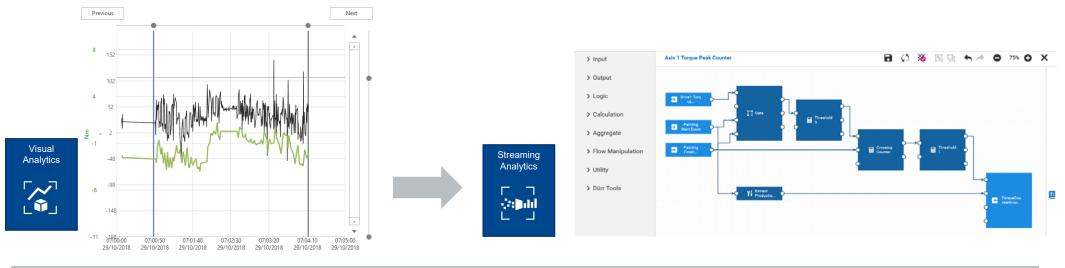

DXQequipment.analytics Visual Analytics

DXQequipment.analytics Optimize your equipment with the help of data. Use Visual- and Streaming Analytics.

- Manual Analysis
 - Analyze critical situations, detect patterns, derive thresholds and parameters to change
- Automated Analysis
 - Create your own algorithms by drag and drop instead of programming (low code platform)
 - Deploy algorithms and analyze data **automatically** with **direct feedback** to your machine in **real-time**
- Example Torque Peak Counter: Set warning if robot axis or dosing drive exceeds defined limit for a defined number of times

DXQequipment.analytics

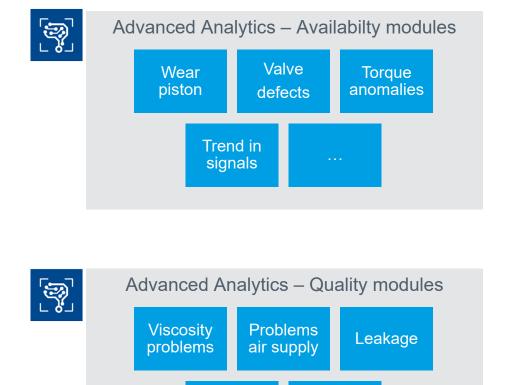

DÜRR

Analytics toolbox for our customers to create own algorithms

DXQequipment.analytics Advanced Analytics

- Advanced Analytics provides fundamentally new diagnostic possibilities
 - Based on Machine Learning
 - Able to detect long-term trends and patterns
 - Out of the box, no Data Analyst required
- Condition based maintenance (predictive maintenance):
 - Increase availability: Prediction of failures and problems before they occur
 - Save money: Instead of too early replacements, replace components at the end of their useful life time
- Automatic detection of possible quality issues

Generic anomaly detection

DXQequipment.maintenance

Maintenance at the right time for the complete body-, paint-shop and final assembly
